EDUCATION

J.S.S. Academy of Technical Education

B.Tech in Information Technology, CGPA - 7.76

Noida, UP

Oct. 2023 – Aug. 2027

T.R.M. Public School

12th, Percentage - 88.6%

Ghaziabad, UP

Apr. 2021 – Jun. 2022

PROJECT

Text Summarizer | *HuggingFace Transformer, FastAPI, PyTorch*

- Developed a Text Summarizer web application using the Hugging Face T5 Transformer model to generate concise and context-aware summaries.
- Implemented an end-to-end NLP pipeline with Python, Transformers, and FastAPI, enabling efficient text preprocessing and real-time summary generation with a responsive user experience.

Flappy Bird | *PyTorch, Gymnasium, Deep Q-Networks, Deep Reinforcement Learning*

- Developed an AI agent to play Flappy Bird game using Deep Q-Networks (DQN) and Deep Reinforcement Learning, enabling the agent to learn optimal flap timings through trial-and-error interactions with the game environment.
- Trained and evaluated the model by maximizing cumulative rewards, allowing the agent to progressively improve obstacle avoidance, survival time, and overall game performance.

Cliff Walking | *Numpy, Gymnasium, Reinforcement Learning*

- Developed a Cliff Walking reinforcement learning agent using the Gymnasium Toy Text environment, where the agent learns an optimal navigation policy by interacting with the environment, avoiding cliff states, and maximizing cumulative rewards
- Implemented Q-learning algorithm to compare path selection and visualizing the agent's improvement over episodes until it consistently discovers the shortest path to the goal.

TECHNICAL SKILLS

Languages: Python, SQL, C++, HTML/CSS

Python Libraries: Numpy, Pandas, Matplotlib, Seaborn, Scikit-learn

Data Analysis: Data PreProcessing, Exploratory Data Analysis(EDA), Statistical Analysis

Machine Learning: Supervised and Unsupervised Learning, Deep Learning, Neural Networks

AI/ML Tools: TensorFlow, PyTorch ,XGBoost

Version Control: Git and GitHub

CERTIFICATES

Introduction to Generative AI – Google Cloud | 2026

- Learned the fundamentals of Generative AI, Large Language Models (LLMs), and their real-world applications.
- Explored concepts such as prompt engineering, foundation models, and AI-powered content generation.
